

### **Architect/Experienced Architectural Technician**

At David Salisbury Joinery Ltd based in Highbridge, Somerset we specialise in the design, manufacture and installation of high quality bespoke timber framed extensions in both engineered timber (soft & hardwood) as well as more traditional solid oak framed buildings. We are increasingly producing larger and more complex designs and we are looking for an individual to bring their experience into the company to assist the department with the design realisation of these projects.

We are seeking an Architect/experienced Architectural Technician to join our professional and dedicated design team to contribute to and coordinate the detailed design process.

Ideally you will have an architectural qualification and have experience working unsupervised on high end and bespoke projects within the UK. Once familiar with our product you will be expected to take on the role of principle designer on whole projects from concept design at sales stage, through manufacture to installation and completion on site.

#### **Essential skills and experience:**

- 5 Years + working experience in the construction industry
- Qualification in Architecture or architectural technology/construction
- A sound understanding of building design and construction
- Knowledge of building regulations
- Excellent working knowledge of AutoCAD
- Attention to detail and high levels of concentration
- Strong approach to problem solving
- Able to work on own initiative

#### **Desirable experience:**

- Experience in structural engineering – this could be a qualification or working closely with qualified structural engineers.
- UK experience and working knowledge of CDM Regulations
- Experience of working with timber frame buildings
- Experience of commercial building projects
